Boots: Cedric Culet

[illegible]

The figure displays a 10x10 grid of 100 small plots, each representing a different combination of the four variables: Technique, Path, Level, and Effect. Each plot has a title and a y-axis. The plots show various trends, including linear, quadratic, and step functions, representing the interaction between the four variables. The plots are arranged in a grid where the rows represent combinations of Technique and Path, and the columns represent combinations of Level and Effect. The y-axis for each plot is labeled with a value, and the x-axis is labeled with a value. The plots show that the relationship between the variables is complex and non-linear, with many interactions between the variables. The plots are arranged in a grid where the rows represent combinations of Technique and Path, and the columns represent combinations of Level and Effect. The y-axis for each plot is labeled with a value, and the x-axis is labeled with a value. The plots show that the relationship between the variables is complex and non-linear, with many interactions between the variables.
